Measuring and ordering your Johnson Bimini Top is easy and accurate when you follow these step by step instructions. Just make your measurements and record them in the area below. Then call us direct for a quote; we'll have you send us your specifications (below) along with credit card information, check or money order.

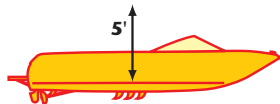

Step One: Mark a point on the port (left) side of your boat, suitable for mounting the top. Measure the distance from the trailing edge of the windscreen to your mark (**d¹**). Use that measurement to mark the corresponding point on the starboard (right) side of the boat. The distance between these two points is your "beam at the mounting point" (**B**).

Step Two: Measure the distance from the floor of the boat to the mounting point of the Bimini Top. (**F**)

Step Three: Decide the optimum height of the Bimini Top from the mounting point (**H**). Take care in making this determination. If your top is too high, you'll lose the shading effect, but if it's too low, it will be difficult to duck under to access the front seats or bow section.

Note: Tournament style boats average approximately five feet from the floor to the top of the Bimini.
